

TECHNOLOGY ASSET MANAGEMENT

YOUR TECHNOLOGY POOL. OUR WAREHOUSE - COMPLETE VISIBILITY

Managing a fleet of technology across hundreds of locations means tracking thousands of assets — spares, returns, replacements, and rotation stock — across multiple device types and lifecycles. NewBold stores, tracks, and manages your technology pool in our secure depot facilities, giving you real-time visibility into your inventory without the overhead of maintaining your own warehouse operation.

WHAT MAKES NEWBOLD DIFFERENT?

- | | |
|------------------------------------|--|
| Full Management: | We don't just hold your devices. We track, test, stage, and ship. Every asset in your pool is imaged, configured, and ready to deploy when you need it |
| Support-Integrated: | When a device fails in the field, the replacement ships from your managed pool — pre-configured, same-day. No separate procurement cycle, no delays |
| Serialized Tracking: | Every device tracked by serial number from receipt through staging, deployment, return, repair, and redeployment. Full audit trail at the asset level |
| Demand-Based Planning: | Inventory levels managed against failure rates, seasonal demand, and rollout schedules. We maintain the right buffer stock so you're never short and never over-invested |
| Single Depot Ecosystem: | Asset management lives inside the same depot that handles your repairs, advanced exchange, staging, and kitting. One facility, one team, one process |
| Reporting & Visibility: | Real-time inventory dashboards with stock levels, device status, movement history, and aging. Monthly reporting aligned to your operational KPIs |

WAREHOUSE & INVENTORY

- Secure, climate-controlled storage at NewBold depot facilities
- Receiving, inspection, and inventory intake processing
- Bin-level organization with barcode/RFID location tracking
- Safety stock and buffer inventory management
- Cycle counting and inventory reconciliation

STAGING & CONFIGURATION

- Device imaging and application loading to your specifications
- Configuration templates for consistent multi-site deployment
- Firmware updates and patch management before shipping
- Kitting with accessories, cables, and documentation
- Quality assurance testing before release to field

DISTRIBUTION & LOGISTICS

- Same-day shipping for replacement and emergency needs
- Scheduled shipments aligned to rollout and refresh timelines
- Ship to individual locations or regional distribution points
- Return merchandise authorization (RMA) processing
- Reverse logistics for failed and retired devices

TRACKING & REPORTING

- Serialized asset tracking across full device lifecycle
- Real-time inventory dashboards and stock level alerts
- Device movement history and chain-of-custody records
- Monthly inventory and utilization reporting
- Aging analysis and refresh planning recommendations

ASSET TYPES WE MANAGE

- POS systems, registers, and peripherals
- Payment devices (PCI-certified facility)
- AIDC devices — scanners, printers, mobile computers
- Networking equipment, kiosks, and digital signage
- Servers, UPS systems, back-office infrastructure

WHO THIS IS FOR

- Multi-site operators managing 100+ locations
- Operations leaders consolidating technology logistics under one partner
- Organizations running advanced exchange programs
- Chains with seasonal demand fluctuations
- Companies consolidating from MSVs
